Senior Systems Unveils New Equipment To Enhance Customer Satisfaction

Palmdale, CA – January 31, 2011 – [Senior Systems](#), a mid-tier electronic manufacturing services (EMS) company serving the medical, industrial and defense/aerospace industries has acquired two advanced pieces of equipment to offer increased productivity, quality and cost efficiency to its customers.

The two capital additions are the Dage XD7500NT X-ray inspection system and the Jade-Handex selective soldering system. The XD7500NT provides superior performance with 70-degree isocentric oblique views and enhanced automated inspection routines. It presents optimum image quality for improved failure analysis, with the ability to recognize features below one micron and magnification up to 7400 times. The new X-ray will augment Senior Systems' already robust inspection capabilities.

The Jade-Handex is equipped with a revolutionary twin PCB rotary table transport system, allowing for simultaneous load/unload during processing. The selective soldering system features a patented Drop-Jet design fluxer, offering quick and effective flushing of the pressurized flux chamber. Both features increase productivity. Labor costs are lowered with minimal hand soldering and reduced handling, thus increasing quality in the process.

A leading EMS provider, Senior Systems specializes in high-reliability, high-cost-of-failure assemblies. From printed circuit board assemblies (PCBA) to full system

integration and box-build, the company exceeds stringent quality requirements to ensure products work the first time and all the time. “With our emphasis on lean culture and execution of visual manufacturing techniques, customers can truly rest easy knowing that their assemblies are in the most competent hands,” states Tim Morrissey, President and CEO at Senior Systems. “Every day our goal is to achieve great things for our customers, ensuring that we exceed their expectations. This capital equipment investment again demonstrates our commitment to providing our customers access to the latest capabilities and highest quality processes.”

Senior Systems provides contract electronics manufacturing services to advanced technology companies primarily in the military/aerospace, medical, industrial and computing sectors. The company’s capabilities include design for manufacturing, prototype and production circuit board assembly, materials procurement and control, manufacturing and test engineering support, complete systems build and final product packaging and logistics. As a full service EMS provider, Senior Systems is ISO 9001:2008, ISO 13485:2003, FDA/GMP and AS9100 registered, as well as being an NSA-approved supplier under the COMSEC standard.
